How to use Actuator Function Tester

2017-12-03

http://OpenActuator.org (zgitae@gmail.com)

Program Composition
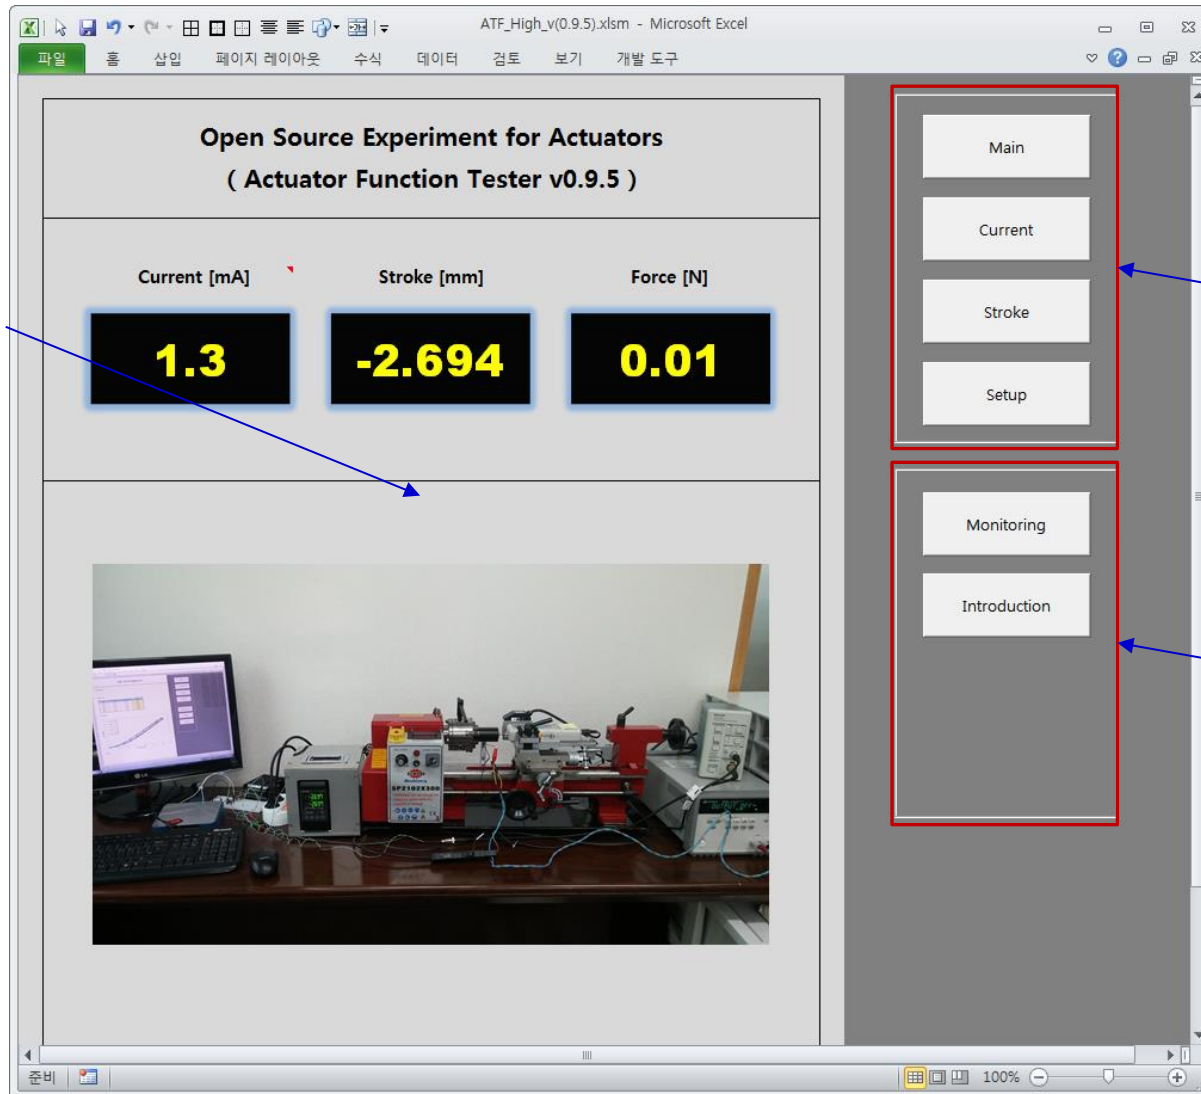

Main Window

➢ **Monitoring Window**

- View real time Current, Stoke and magnetic force data

➢ **Settings Window**

- Correction and setting of physical values

Main Window

➤ **Current Window**

- Examination of Current-Magnetic force
➤ **Stroke Window**

- Examination of Stroke-Magnetic Force

전류-자기력 실험보고서

1. 실험 정의

2. 실험 조건

(단위 : mm)

구분	초기전류변위	최대전류변위	변위차
측정 1			
측정 2			
측정 3			
측정 4			
측정 5			

3. 측정 결과

4. 결론

변위-자기력 실험보고서

1. 실험 정의

2. 실험 조건

(단위 : mA)

구분	시작전류	최종전류	전류차
측정 1			
측정 2			
측정 3			
측정 4			
측정 5			

3. 측정 결과

4. 결론
Program Setting

➤ **Method of Program Setting**

1. Refer the AFT Installation Manual

1. Hardware Setting

DAQ Board Number : `1` [Check] (Arduino : ComPort, NI : Device Number)

P/Supply Com Port : `3` [Check]

2. Compensation Setting

가. 전류 [mA]			나. 변위 [mm]			다. 자기력 [N]		
측정전류	측정레벨	레벨 측정	측정변위	측정레벨	레벨 측정	측정힘	측정레벨	레벨 측정
0	-0.02037		0	-5.0012		0	-0.00213	
13	0.055365		0.2	-4.89975		1	0.064998	
26	0.131411		0.4	-4.79865		2	0.132023	
38	0.208536		0.6	-4.70083		3	0.198246	
51	0.284299		0.8	-4.60115		4	0.265771	
64	0.361372		1	-4.50046		5	0.333349	
77	0.436227		1.2	-4.39908		6	0.399559	
89	0.512062		1.4	-4.29969		7	0.466565	
102	0.588154		1.6	-4.20152		8	0.535808	
115	0.664068		1.8	-4.09975		9	0.603774	

기울기	167.5298		기울기	1.9998		기울기	14.8739
절편	3.5366		절편	9.9995		절편	0.0409

- Y 축인 측정물리량 범위는 해당 물리량의 동작범위와 유사하게 맞추어라.
- 물리량의 동작범위에 대한 측정레벨이 2,000 등분이상 되도록 증폭비를 조정하라.

3. Measurement Setting

Sampling Period : `50` ms   Max Current : `500` mA

Moving average Count : `5`   Max Voltage : `40` V

가. 전류 측정   나. 변위 측정

Initial Current : `0` mA   Initial Stroke : `0` mm

Final Current : `315` mA   Final Stroke : `1` mm

Data Monitoring

➤ Measurement Explanation

1. Move to Monitoring Window
2. Open indicator window
3. View real time measured data and stop
4. Current Output
5. Continuous Current output
6. Measurement of real time data

Current Measurement

➤ **Measurement orders**

1. Set Zero Point prior to Actuator stroke Zero Point
   - The position of Zero is the start of the moving parts or the final location
   - The Zero point is sensed by confirming the contact via power sensor
2. Move to Current Window
3. Click Measurement.
4. Move sensor part to the measured Stroke
5. Input measurement of Initial Current, final current and current divisions
6. Set Series No. (Supports total five Series)
7. Click Measure button

Current Measurement

➤ Measurement orders

1. Set Zero Point prior to Actuator stroke Zero Point
   - The position of Zero is the start of the moving parts or the final location
   - The Zero point is sensed by confirming the contact via power sensor
2. Move to Stroke Window
3. Click Measurement.
4. Input measurement of Initial Stroke, final Stroke and Stroke divisions
5. Move Sensor part below initial stroke
6. Set Series No. and input permitted current(Supports total five Series)
7. Click Measure button
